
INSTRUCTION CARD

Benjamin Boundy

- For monitored use only
- Use the Boundy for babies in the recommended weight class
- Monitor temperature fluctuations, especially in babies who get vasodilators (eg prostaglandins)
- Do not place on chest, abdomen, or face because this could obstruct the babies airway
- Use the ends briefly on a body part

Positioning Boundy

- head neutral positioned relative to body in midline orientation
- arms/legs in flexed position
- mouth-hand contact
- feet against the side or lower edge
- prevent W-posture of arms/legs

Lateral position

- Boundy edge firmly supports the back
- place the lower arm forwards
- mouth-hand contact possible

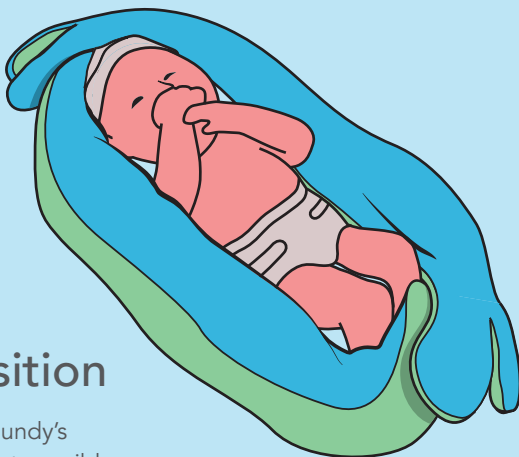

Prone position

- use 2 Benjamin Boundy's
- use ComfyBelly (no lower than the navel level and no wider than body).
- shoulders slightly bent and supported
- legs pulled up
- edge of the Boundy provides sturdy restriction

Supine position

- use 2 Benjamin Boundy's
- mouth-hand contact possible
- shoulders slightly rounded
- hips slightly bent
- edge of the Boundy provides sturdy restriction

As "extra hands"

- short-term: "Containment Holding"
